HOW TO PAINT A HARD-TO-REACH ROOF-BASED WATER TOWER NEXT TO POWER LINES FROM THE SLOPED PAVEMENT IN HALF THE TIME

www.alphaplatforms.com

THE CHALLENGE

A commercial painting company reached out to Alpha Platforms to hire an aerial platform to paint a water tank. Previously, the company used standard JLG self-propelled lifts from Sunbelt. The challenge was that the tower was located on top of a building, cornered between a railroad, a power line, a bridge, and a wall. In addition, the job site was on a significant slope.

The JLG lift was completely unsuitable for this job because it could not safely reach up and over the roof around the tower from the tight space on the steep slope near hanging electric wires. For those reasons, the client decided to try Alpha Platforms lifts.

THE SOLUTION

To reach a 125-foot tower with a 60-foot side reach, Alpha Platforms deployed its A-150 truck-mounted aerial platform with a full-time trained IPAF-certified operator. The operator delivered the platform straight to the job site by 7 am on the scheduled day, set it up on the steep slope in just 15 minutes, and invited the work crew in the basket.

Due to Alpha Platforms lifts' unique "up and over" and side-reach capabilities, the entire project was completed from just two set-up locations inside the parking lot. The specs of our state-of-the-art A-150 lift can be seen [here](#).

THE OUTCOME

The client's work crew power-washed the tank on day one and painted it over the next two days. Two technicians placed all their washing and painting equipment into Alpha's 12-foot-wide, 1,320-pound load capacity basket. Alpha's professional operator maneuvered the lift all day every day as the project progressed, accessing hard-to-reach places where a standard JLG lift could not get.

AS A RESULT, THE JOB WAS COMPLETED IN HALF THE PLANNED TIME.

The client was impressed by the lift's smooth movement and the feeling of sturdiness and extreme safety in the basket.

Our precise German-made lifts have become the height access method of choice for those who try them, as they combine unmatched productivity, safety, and reach.
